chandan singh

llms / ai researcher

csinva23@gmail.com | csinva | gscholar
csinva.io | csinva | csinva

education

phd | cs
uc berkeley (bair) | '17-'22
research: interpretable ai
advisor: bin yu

bs | cs & math
university of virginia | '14-'17
double major

skills

llms • interpretability
pre-training • post-training
data science • causal inference
healthcare • neuroscience

teaching

berkeley | fall 2019
artificial intelligence: cs 188

berkeley | summer 2018
machine learning: cs 189/289

service

mentorship
cbai safety mentoring '25-'26
bair undergrad mentoring '18-'22

volunteering
basis education volunteering '19-'22
computer literacy volunteering '15-'17

organizer / area chair
iclr trustml workshop '26
ml4h '25
xxai workshop, ml4h '24

reviewer
iclr '27 • iclr,icml,neurips '26
arr,iclr,icml,iccv,neurips,pnas '25
iclr,icml,neurips '24
neurips '23 • acl '22
iclr,cvpr,aaai,neurips '21 • neurips '20

awards

berkeley grad slam semifinalist '19, '22
pdsoros fellowship finalist '19
outstanding teaching award '18
uva rader research award '17
uva undergrad symposium winner '17
icpc regional qualification '14-'16
1st place microsoft code jam '16
rodman scholarship '14-'17

experience

voyage ai (acquired by mongodb)
staff research scientist | summer '26 - present
- pre-training and post-training large embedding models

microsoft research
senior research scientist (deep learning group) | summer '22 - now
- researched interpretability & efficiency of llms
- built foundation models for neuroscience & medicine
- managed small group of phd students & interns

health tech
paige ai | research scientist | summer '21 - summer '22
- interpretable foundation models in digital pathology

response4life | volunteer data scientist | spring '20
- helped develop, integrate, and deploy models to forecast covid-19 severity

pacmed ai | healthcare ml intern | summer '19
- developed interpretable, tabular ai models for healthcare

phd
berkeley | interpretable ai research (bin yu group) | fall '17 - spring '22
- developed post-hoc interpretation methods for neural networks
- developed interpretable models in medicine, biology, and computer vision

aws | ai fairness intern (pietro perona group) | summer '20
- researched algorithmic bias with causal matching using GANs

meta ai | computer vision intern | summer '17
- investigated unsupervised deep learning for segmentation of satellite imagery

undergrad
hhmi | computer vision intern (srini turaga group) | summer '14, '15, '16

uva | graphical models research (yanjun qi group) | fall '16 – spring '17

uva | comp. neuroscience research (william levy group) | fall '14 - fall '16

selected works

neuroscience
- augmenting interpretable models with llms: **cs** et al. *nature comms, '23*
- generative causal testing with llms: antonello*, **cs***, et al. *nature neuro, '26*
- interpretable embeddings by asking llms questions benara*, **cs***, et al. *neurips, '24*

healthcare
- human-ai co-design for clinical models: feng*, kothari*, ..., **cs**. *npj digital med '26*
- interpretable models via autoresearch: **cs** et al. *neurips '26*; 1.6k+ Github stars
- fast interpretable greedy-tree sums: tan*, **cs***, nasseri*, agarwal* et al. *pnas '22*

general interpretability
- post-hoc attention steering for llms: zhang, **cs**, et al. *iclr '24*
- adaptive wavelet distillation from dnns: ha, **cs**, et al. *neurips '21*
- hierarchical interpretations for dnn predictions: **cs***, murdoch*, & yu. *iclr '19*
